

How To Make Your Own Miracle-Gro

How To Make Your Own Miracle-Gro

A lot of people, myself included HATE to use commercial fertilizer on their plants and veggies. It works but there are so many chemicals involved, some I can't even pronounce that are so bad for the environment. Today I am sharing a little

family secret recipe (I know, not so secret anymore) that has had the same results if not better than miracle-grow. We call it the plant growing solution.

This recipe has been in our family for over 60 years! I hope you can use it and make it your family go-to fertilizer too.

What you need:

- 1 gallon of water
- 1 tbsp Epsom salt
- 1 tsp baking soda
- 1/2 tsp of Household ammonia. Mix all ingredients together and use once a month on your plants.

What to do:

- * Mix all ingredients together. (shake before use)
- * Use once a month on your plants by mixing a 1/8 -1/4 of the concentrate with 4 cups of water in a watering can. (use 1/8th for a light feeding or 1/4th for a heavier feeding)
- * Mix all ingredients together. (shake before use)
- * Mix all ingredients together. (shake before use)

* Use once a month on your plants by mixing a 1/8 -1/4 of the concentrate with 4 cups of water in a watering can. (use 1/8th for a light feeding or 1/4th for a heavier feeding)

* Watch your plants explode with growth
