

## Colloidal Silver What it can and cannot do for you

By Joseph Parish

This article is a continuation of our previous article on colloidal silver. To recap the last article lets briefly reveal what we had covered involving the background information. We began by discussing how the colloidal silver has for many years been a major source of inexpensive antibiotics which presented no known side effects when prepared and used properly. We further went on to explain how the early pioneers had used their silver coins in the milk containers to protect their milk from spoilage while traveling across the prairies.

In this session I would like to provide you with a small list of some of the various medical conditions which can potentially be remedies by the use of colloidal silver. Once again I would like to present my legal disclaimer in the event that you use this information. As previously stated, the article is intended to provide an educational background in colloidal silver and is not meant in any way to be substituted for professional advice. I do

not profess to be a medical doctor and as such I am unable to neither advise nor prescribe silver for any condition. I can however relate to you my experiences and those of others.

Without further ado let's proceed to the meat of this article. Colloidal silver is an effective antibiotic for a vast number of medical conditions. It has demonstrated its ability to correct many human ailments without damaging side effects. The key here is to use your colloidal silver effectively in a proper manner.

Colloidal silver should never be used when consuming salty products. You should wait for at least ½ hour after eating salt before using the silver. The idea here is to prevent the creation of silver nitrate which is a salt which has in the past turned human skin to a blue-gray shade. Under normal conditions and in the absence of salt this does not happen. Another important thing to remember when you make your own silver is to filter it properly. You don't want large silver chunks to get into your body. The human body normally will expel colloidal silver however when these larger chunks of silver are taken into the body then they accumulate in the various tissues. This is a condition that we do not want.

Usually we would like the colloidal silver to enter the blood stream as quickly as possible. When using the colloidal silver, you should try to get it under your tongue prior to swallowing it. It seems that your body absorbs a certain amount of the silver from the area just under the tongue. In addition, you should be on a specific schedule for 3 or 4 days straight. As we had mentioned in our previous article you should start by taking a spoonful daily for 4 days and then reduce it to ½ spoonful. I have under extreme conditions used complete 16-ounce bottles at one sitting but that is generally under what I consider emergency conditions.

Let me take a few minutes to relate some of my personal events concerning colloidal silver. I had initially begun using colloidal silver ten years ago. Now I am not a stupid person who rushes out and tries just anything that comes along. I did a considerable amount of research on this subject. I started making my own colloidal silver and found it to be extremely healthy. I never use it on a daily basis. Generally, I will start treatments with it at the first sign of an illness.

One time I had to go into the hospital for a heart attack. They were scheduling me for having stents installed the following morning however with all the germs in the hospital I managed to catch a very bad cold. This would have put a damper on the medical procedure that was planned so I asked my wife to bring me a 16-ounce bottle of colloidal silver from home. She complied and I drank the complete bottle down immediately. By morning my cold was completely gone and the procedure went as planned.

Another situation involved my youngest son who was in his mid to late 20's at the time. He seemed to develop a bad case of food poisoning. I wanted to take him up to the hospital but he refused and requested that I make him some of the colloidal silver that I use. He fully knew that it usually took me 3 hours to make a batch of it so he lay down on

the coach and waited with tears in his eyes. After the 3 hours were up he drank the complete 16 ounces down and by morning his food poisoning was completely gone.

In another situation my wife had strep throat. She took the same amount of colloidal silver and by morning her strep throat was gone. In my opinion the product is a wonder drug. No bacteria or virus can survive it.

Colloidal silver has been known to be effective against more the 650 different diseases. That is effectively 650 various microorganisms that plaque the human body. A few of the human diseases that silver has successfully been used for are as follows:

- Acne
- Allergies
- Arthritis
- athletes' foot
- bladder inflammation
- blood parasites
- blood poisoning
- boils
- burns
- cancer
- cholera
- colitis
- conjunctivitis
- cystitis
- dermatitis
- diabetes
- dysentery
- eczema
- fibrosis's
- gastritis
- gonorrhea
- hay fever
- herpes
- impetigo
- indigestion
- keratitis
- leprosy
- leukemia
- lupus
- lymphangitis
- Lyme disease
- Malaria

- Meningitis
- Neurasthenia
- parasitic infections
- pneumonia
- pleurisy
- prostate
- psoriasis
- rhinitis
- rheumatism
- ringworm
- scarlet fever
- seborrhea
- septicemia
- shingles
- skin cancer
- staphylococcus
- stomach flu
- syphilis
- thyroid
- tuberculosis
- tonsillitis
- toxemia
- trachoma
- whooping cough
- yeast infection

The above list is only a start. You should keep in mind that the diseases and conditions listed above may have various degrees and, in some cases, it may be too late for the colloidal silver to help. A typical example of this would be cancer. If the cancer has progressed too far the silver cannot help the person.

I leave this information for you to digest until the next article which will cover making your own colloidal silver machine.
