

The Best Fire Starter Ever Invented

Survival Topics Firesteels

Firesteels are one of the Most Reliable Ways to Start a Fire in the Wilderness, even when wet!

We offer 4-sizes - From HUGE to small enough to fit comfortably in your wallet.

Users report these firesteels give the largest sparks they have ever seen.

Help support Survival Topics.com: purchase your Swedish Firesteels at our Survival Supply Store.

The ability to start a fire is the number one survival skill you can have, without which you will likely be in serious trouble during an emergency survival or disaster situation.

But there is a problem; those butane lighters and supposedly “waterproof” matches you use in civilization may very well fail you in an emergency when you need them most.

There is a solution to this problem, one that I stake my life on for always being able to start a fire any time I need. This incredible product has never failed me, even under the most adverse outdoor conditions.

The best fire starter ever invented is the Survival Topics firesteel.

Common Fire Starters and how they fail

Before we explore why Firesteels are the most reliable way to start fires, let’s cover several of the more common means people use:

Matches – few people realize that matches have a shelf life, which is often listed as only several years. Old matches, especially if exposed to dampness, may not light when you need them to. Even “waterproof” matches will often not hold up under extended wet conditions. This means that you cannot safely store thousands of matches with the idea you will be able to use them to start fires in a future emergency. Should your matches become damp or a long term disaster emergency occur your matches will be unreliable.

Lighters – butane lighters are problematic for use in starting fires; they run of fuel (which also has a shelf life) that may not be available during a survival emergency, wear out flints or even break. It has been my experience that anything with working parts is subject to failure and is never totally reliable. These problems limit their use of lighters to only a short term solution for starting fires.

Flint and Steel – closer being the perfect fire starter is flint and steel. You can dunk flint and steel in water, pull it out and still produce sparks. You can make untold thousands of fires with just a single piece of flint and steel. What’s more, flint and steel has no shelf life – twenty years from now it will still have the ability to start a fire. The problem with flint and steel is that for the average person there is a learning curve. You must learn how to make and catch the spark which takes practice, patience and the proper tinder. In an emergency where the need to start a fire quickly is important, flint and steel can let you down.

What to Look for in a Survival Fire Starter

As a survival expert I have constantly been seeking the perfect fire starter that:

Will function reliably in all conditions no matter how wet, windy, or cold.
Has a minimum of working parts that can fail.

Requires no fuel that can run out or become unavailable.
Can start thousands of fires
While being compact enough to fit into a small survival kit.
And be stored for many years and still start fires whenever needed

A tall order indeed - matches and lighters DO NOT pass the test and I would never stake my life or that of my family and Survival Topics readers on their reliability.

The Best Survival Fire Starter Ever Invented

After years of searching I have found the best fire starter ever invented. Firesteels. I carry Survival Topics firesteels wherever I go and they have never failed me even under the most adverse conditions.

Survival Topics firesteels are:

Simple to use even with no experience.
No working parts that can break down.
Will store for decades and still function perfectly
Made of special material that will still light a fire even after being dunked in water.
Never fails to spark at 3000 degrees C (5,000 degrees F)!
Capable of lighting thousands of fires yet small enough to fit in a mini survival kit.

How Survival Topics Firesteels Work

When you need a fire simply scrape your firesteel and you have an astonishing shower of 5,000 degree F sparks at your command. What's more, the Survival Topics firesteels are capable of lighting thousands of fires yet are small and take up very little space; try carrying thousands matches with you!

I sell Survival Topics firesteels because these firesteels always work, no if ands or buts. Survival Topics firesteels are of the highest quality - I stake my life on it!

My first and foremost goal is to help you survive come what may so I want every one of you to carry a firesteel with you at all times. Then you will be prepared to start as many survival fires you need whenever you need them.

Survival Topics firesteels are offered to my readers for the best prices hands down. Group buys and volume discounts are available.
